

GAME OVER

FIVE WAYS TO AVOID RUINING YOUR RESEARCH PROJECT

1

THINK LOGISTICS

Failing to plan for logistics is the most common way that research projects break down.

2

DESIGNATE A PROJECT MANAGER

Having a designated project manager will keep the research team coordinated and engaged.

3

SET PROTECTED TIME

Setting protected and dedicated time is mandatory to ensure that the project stays on track.

4

DON'T FORGET THE TEAM

Most research projects need an entire team. Keep the team engaged and focussed on the research topic.

5

CHECK YOUR AMBITIONS

Overly ambitious projects are a common cause of failure. Ensure that scientific enthusiasm is balanced by feasibility.
